

# Mobile Device Security

## Creating a Passcode

This document provides instructions for how to maintain your mobile device security by creating a passcode (also known as a PIN). After the passcode is enabled, it will be required to unlock or make any significant changes to the device.

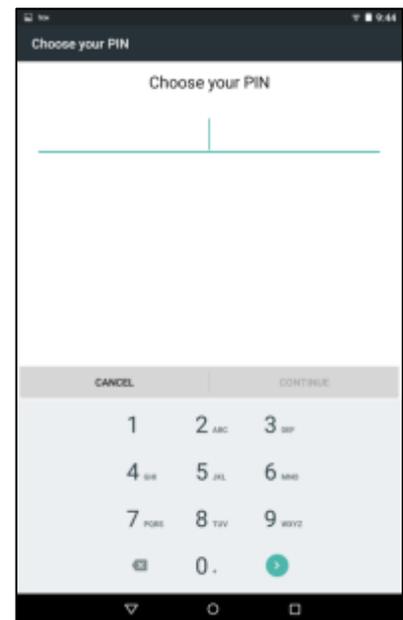

## Android

To create a passcode for your Android 5 device, please follow these steps.

1. Open Settings and select **Security**.
2. Press **Screen Lock**, then select **PIN** as the type of passcode you would like.

3. Enter a 4-digit passcode that complies with the following recommendations:
  - Avoid using the same number four times (i.e. 1111).
  - Avoid using common number patterns (i.e. 2468 or 1234).
4. Press **Continue**.
5. Confirm the passcode by entering it a second time and press **OK**.
6. Another page may appear asking how you want notifications to show when your device is locked. Select your preferred option and press **Done**.
7. The passcode will be applied immediately.

## iOS

To create a passcode for your iOS device, please follow these steps.

1. Open Settings and select **Passcode**.
2. The “Passcode Lock” screen will appear – select **Turn Passcode On**.
3. A small window will appear and ask you to enter a passcode. Enter a 4-digit passcode that complies with the following recommendations:
  - Avoid using the same number four times (i.e. 1111).
  - Avoid using common number patterns (i.e. 2468 or 1234).
4. Another window will appear and ask you to verify the passcode by entering it a second time.
5. The passcode will be applied immediately.
