# Saving and Approving Content in Direct Edit Mode

When making changes to text in the Direct Edit mode, complete your edits, and then click on the blue "Save Content" bar at the bottom of that content module. This is the equivalent of "Save Changes" in regular editing mode.

It is important to remember to approve this change for going "live".

The approval function is done by clicking on the check box icon in the row of icons at the top of the content module.
